Data Evaluation Report on the Reproductive Effects of AE F130060 Technical on Avian Species *Colinus virginianus*

PMRA Submission Number

EPA MRID Number 45386228

Data Requirement:

PMRA DATA CODE
EPA DP Barcode D284719
OECD Data Point
EPA MRID 45386228
EPA Guideline §71-4a

4/17/04

Test material:

AE F130060 Technical Purity: 94.6%

Common name:

Mesosulfuron-methyl

Chemical name:

IUPAC: Methyl 2-[3-(4,6-dimethoxypyrimidin-2-yl)ureidosulfonyl]-4-methanesulfonamidomethylbenzoate (p. 127)

CAS name: Not reported

CAS No.: Not reported

Synonyms: Code: AE F130060 00 1C95 0001

Date Evaluation Completed:

CITATION: Ebert, E. 2000. Bobwhite Quail Dietary Reproduction Study. Unpublished study performed and submitted by Aventis Pharma Deutschland GmbH. Hattersheim, Germany. Laboratory Report No. 2000.0138. Study initiated April 20, 1998 and completed July 18, 2000.

2013020

EXECUTIVE SUMMARY:

The one-generation reproductive toxicity of AE F130060 Technical (Mesosulfuron-methyl) to groups (16 pens/treatment level) of 1 male and 1 female, 7-month-old Northern Bobwhite quail was assessed over approximately 20 weeks. AE F130060 Technical was administered to the birds in the diet at mean-measured concentrations of <1 (LOD, negative control), 38, 190, or 1000 ppm a.i.

There were no significant treatment-related effects on any adult or offspring parameter. The NOEC and LOEC levels were 1000 and >1000 ppm, respectively.

This toxicity study is scientifically sound. The highest concentration tested did not elicit an adverse effect on any parental or reproductive parameter. The maximum expected field residue levels are expected to be far lower than the maximum tested. This study is considered acceptable - core.

Results Synopsis

Test Organism Size/Age: Approximately 7-months old at test initiation
Males: 207 ± 13 g, females: 204 ± 14 g

NOEC: 1000 ppm

LOEC: >1000 ppm

Endpoint(s) Affected: None

I. MATERIALS AND METHODS

GUIDELINE FOLLOWED:

The study protocol was based on procedures of the U.S. EPA Pesticide Assessment Guidelines, Subsection 71-4 (1982) and OECD Guideline for Testing of Chemicals No. 206 (1984). Deviations from §71-4 are:

1. The health, including mortality, of the quail during acclimation was not described.
2. The construction materials for parental pens were not specified.
3. The maximum anticipated field residue level for proposed wheat use application rates is 3 PPM.
4. Details pertaining to the preparation and storage of test diets was not specified. AE F 130060 Technical was shown to be stable in treated feed (all test levels) prepared and stored at room temperature for 35 days.
5. A high level of AE F130060 Technical variability was observed in treated feed prepared at all test levels during Week 8; coefficients of variation (C.V.) were 26.8 to 28.5% (p. 119). As a result, additional feed was prepared and analyzed during Week 10. C.V. were acceptable (<10%) for all remaining intervals (Weeks 1, 4, 10, 12, and 16).
6. The photo-period was 8 hours light/day up through Week 7, instead up through Week 8.
7. The set temperature during hatching was approximately 37.2°C, slightly lower than the recommended temperature of 39°C. Additionally, the photo-period during hatching was not specified.

These deviations did not affect the scientific validity of the study; however, this study does not fulfill guideline requirements.

Data Evaluation Report on the Reproductive Effects of AE F130060 Technical on Avian Species *Colinus virginianus*

PMRA Submission Number

EPA MRID Number 45386228

7. The set temperature during hatching was approximately 37.2°C, slightly lower than the recommended temperature of 39°C. Additionally, the photo-period during hatching was not specified.

These deviations did not affect the scientific validity of the study; however, this study does not fulfill guideline requirements.

COMPLIANCE: Signed and dated GLP, Quality Assurance, and Data Confidentiality statements were provided. This study was conducted in accordance with German/OECD and U.S. EPA GLP standards (p. 3).

A. MATERIALS:

1. Test Material AE F130060 Technical

Description: Pale cream solid

Lot No./Batch No.: 35316 (p. 127)

Purity: 94.6% (w:w)

Stability of Compound Under Test Conditions: The stability of AE F130060 Technical was assessed in the treated feed prepared at all test levels after 35 days of ambient storage. Recoveries averaged 97-107% of initial values (reviewer-calculated from mean recoveries provided in second table on p. 16; individual data provided on pp. 114-117 of the analytical report).

Storage conditions of test chemical: At approximately 22°C.

OECD requires water solubility, stability in water and light, pK_a , P_{ow} , and vapor pressure of the test compound. OECD requirements were not reported.

PMRA Submission Number

EPA MRID Number 45386228

2. Test organism:

Table 1: Test organism.

Parameter	Details	Remarks
		Criteria
Species (common and scientific names):	Northern Bobwhite quail (<i>Colinus virginianus</i>)	<i>EPA requires: a wild waterfowl species, preferably the mallard, <i>Anas platyrhynchos</i>, or an upland game species, preferably the northern bobwhite, <i>Colinus virginianus</i>.</i>
Age at Study Initiation:	Approximately 7 months	<i>EPA requires: birds should be approaching their first breeding season.</i>
Body Weight: (mean and range)	Males (overall, n=64): 207 ± 13 g Females (overall, n=64): 204 ± 14 g	Individual body weights were recorded at Weeks 0, 2, 4, 6, 8, and 20 (test termination). <i>EPA requires that body weights should be recorded at test initiation and at biweekly intervals up to week eight or up to the onset of egg laying and at termination.</i>
Source:	Morris Quail Farm Inc. Goulds, FL	Birds were phenotypically indistinguishable from wild birds. <i>EPA requires that all birds should be from the same source.</i>

B. STUDY DESIGN:

1. Experimental Conditions

- a. Range-finding Study - None conducted.
- b. Definitive Study

Data Evaluation Report on the Reproductive Effects of AE F130060 Technical on Avian Species *Colinus virginianus*

PMRA Submission Number

EPA MRID Number 45386228

Table 2: Experimental Parameters.

Parameter	Details	Remarks
		Criteria
Acclimation period:	2 weeks	Bobwhite were fed an Ssniff Complete Diet for Quails - Breeding (p. 93) and provided tap water. Results of analysis of feed for select chlorinated hydrocarbons, pesticides, and metals are provided on pp. 94-95.
Conditions (same as test or not):	Same as test	
Feeding:	Water and feed were provided <i>ad libitum</i> .	
Health (any mortality observed):	Pre-test mortality was not reported.	<i>EPA recommends a 2-3 week health observation period prior to selection of birds for treatment. Birds must be generally healthy without excess mortality. Feeding should be <u>ad libitum</u>, and sickness, injuries or mortality be noted.</i>
Test duration pre-laying exposure:	Approximately 10 weeks	
egg-laying exposure:	Approximately 10 weeks	
withdrawal period, if used:	None	<i>EPA requires <u>Pre-laying exposure duration</u>. At least 10 weeks prior to the onset of egg-laying. <u>Exposure duration with egg-laying</u> At least 10 weeks. <u>Withdrawal period</u> If reduced reproduction is evident, a withdrawal period of up to 3 weeks should be added to the test phase.</i>

Data Evaluation Report on the Reproductive Effects of AE F130060 Technical on Avian Species *Colinus virginianus*

PMRA Submission Number

EPA MRID Number 45386228

Parameter	Details	Remarks
		Criteria
Pen (for parental and offspring) size:	Parents (one male and one female) were housed in 76 x 33 x 24 cm pens with sloping floors and egg catchers. The floor space of the offspring pens was approximately 4200 cm ² (≥ 50 cm ² /chick).	<u>Pens</u> <i>Adequate room and arranged to prevent cross contamination</i> <u>Materials</u> <i>Nontoxic material and nonbinding material, such as galvanized steel.</i> <u>Number</u> <i>At least 5 replicate pens are required for mallards housed in groups of 7. For other arrangements, at least 12 pens are required, but considerably more may be needed if birds are kept in pairs. Chicks are to be housed according to parental grouping.</i>
construction materials:	Not specified for parental pens. The offspring pens were plastic boxes on corrugated cardboard.	
number:	16 parental pens/treatment level	
Number of birds per pen (male:female)	2 birds/pen (1 male:1 female)	<i>EPA requires one male and 1 female per pen. For quail, 1 male and 2 females is acceptable. For ducks, 2 males and 5 females is acceptable.</i>
Number of pens per group/treatment negative control: solvent control: treated:	16 pens N/A 16 pens/treatment	<i>EPA requires at least 12 pens, but considerably more if birds are kept in pairs. At least 16 is strongly recommended.</i>

Data Evaluation Report on the Reproductive Effects of AE F130060 Technical on Avian Species *Colinus virginianus*

EPA MRID Number 45386228

Parameter	Details	Remarks
		<i>Criteria</i>
Test concentrations (ppm diet) nominal: measured:	0, 40, 200, or 1000 ppm <1 (LOD), 38, 190, or 1000 ppm a.i.	Mean-measured concentrations were reviewer-calculated from data provided in the second table on p. 16. Samples for all test levels were collected from treated feed prepared for Weeks 1, 4, 8, 10, 12, and 16. <i>EPA requires at least two concentrations other than the control are required; three or more are recommended.</i>
Maximum labeled field residue anticipated and source of information:	Not specified	It was reported that 1000 ppm is the limit concentration according to relevant OECD testing guidelines (p. 8). <i>EPA requires that the highest test concentrations should show a significant effect or be at or above the actual or expected field residue level. The source [i.e., maximum label rate (in lb ai/A & ppm), label registration no., label date, and site should be cited]</i>
Solvent/vehicle, if used type: amount:	Not specified	A detailed description of the test feed preparation was not provided. <i>EPA requires corn oil or other appropriate vehicle not more than 2% of diet by weight</i>

Data Evaluation Report on the Reproductive Effects of AE F130060 Technical on Avian Species *Colinus virginianus*

PMRA Submission Number

EPA MRID Number 45386228

Parameter	Details	Remarks
		Criteria
Was detailed description and nutrient analysis of the basal diet provided? (Yes/No)	Yes	<p>Basal diets contained 25.0% protein, 5.0% fat, 3.5% fiber, and 3.0% calcium (p. 93). Offspring received Ssniff Complete Diet for Quails - Rearing (p. 92).</p> <p>EPA requires a commercial breeder feed (or its equivalent) that is appropriate for the test species.</p>
Preparation of test diet	Details pertaining to the preparation and storage of test diets was not specified.	<p>A premixed containing the test substance should be mechanically mixed with basal diet. If an evaporative vehicle is used, it must be completely evaporated prior to feeding.</p>
Indicate whether stability and homogeneity of test material in diet determined (Yes/No)	Yes	
Were concentrations in diet verified by chemical analysis?	Yes	Samples were analyzed from feed prepared during Weeks 1, 4, 8, 10, 12, and 16 (individual values provided on pp. 114-123 of the analytical report).

Data Evaluation Report on the Reproductive Effects of AE F130060 Technical on Avian Species *Colinus virginianus*

PMRA Submission Number

EPA MRID Number 45386228

Parameter	Details	Remarks
		Criteria
Did chemical analysis confirm that diet was stable and homogeneous?	Yes Yes, although ideally C.V. should be <5%.	The stability of AE F130060 Technical was assessed in the treated feed prepared at all test levels after 35 days of ambient storage. Recoveries averaged 97-107% of initial values (reviewer-calculated from mean recoveries provided in second table on p. 16; individual data provided on pp. 114-117 of the analytical report). The homogeneity of AE F130060 Technical was assessed in the treated feed prepared at all test levels; duplicate (or triplicate) samples were collected from the top, middle, and bottom of batches prepared for Weeks 1, 4, 8, 10, 12, and 16. High variability was observed during Week 8 (C.V. of 26.8-28.5%), and therefore additional samples were prepared and analyzed at Week 10. Excluding Week 8 results, Coefficients of Variation ranged from 1.2-6.5% for the 40 ppm level, 4.2-8.9% for the 200 ppm level, and 1.8-11.8% for the 1000 ppm level (reviewer-calculated from mean values provided on pp. 114-123).
Feeding and husbandry	Feeding and husbandry conditions appeared to be adequate, given guideline recommendations.	

Data Evaluation Report on the Reproductive Effects of AE F130060 Technical on Avian Species *Colinus virginianus*

PMRA Submission Number

EPA MRID Number 45386228

Parameter	Details	Remarks
Criteria		
Test conditions (pre-laying) temperature:	22 ± 1 °C	Light intensity ranged from 200-300 lux.
relative humidity:	50-80%	
photo-period:	8 hr light/day up through Week 7; 16 hr light/day thereafter.	<p><i>EPA Requires Temperature: About 21 °C (70 °F)</i></p> <p><i>Relative humidity: About 55%</i></p> <p><i>Lighting First 8 weeks: 7 h per day. Thereafter: 16-17 h per day. At least 6 foot candles at bird level.</i></p>
Egg Collection and Incubation		
Egg collection and storage collection interval:	Daily	
storage temperature:	12-16°C	
storage humidity:	50-70%	<i>EPA requires eggs to be collected daily; egg storage temperature, approximately 16°C (61°F); humidity approximately 65%.</i>
Were eggs candled for cracks prior to setting for incubation?	Yes	<i>EPA requires eggs to be candled on day 0</i>
Were eggs set weekly?	Yes	
Incubation conditions temperature:	37.3-38.8°C	
humidity:	60-70%	
When candling was done for fertility?	Between Days 8 and 11 for fertility and Day 18 for viability.	<p><i>EPA requires: Quail: approx. day 11 Ducks: approx. day 14</i></p>

Data Evaluation Report on the Reproductive Effects of AE F130060 Technical on Avian Species *Colinus virginianus*

PMRA Submission Number

EPA MRID Number 45386228

Parameter	Details	Remarks
		Criteria
When the eggs were transferred to the hatcher?	Day 21	EPA requires: Bobwhite: day 21 Mallard: day 23
Hatching conditions temperature:	Approximately 37.2°C	
humidity:	Approximately 80%	
photoperiod:	Not specified	EPA requires: temperature of 39°C (102°F), humidity of 70%
Day the hatched eggs were removed and counted	Days 24 or 25	EPA requires Bobwhite: day 24 Mallard: day 27
Were egg shells washed and dried for at least 48 hrs before measuring?	Shells were washed and dried in a drying cabinet at 60°C for 24 hours.	
Egg shell thickness no. of eggs used: intervals:	All eggs laid during one day during Weeks 11, 13, 15, 17, and 19 in each replicate.	
mode of measurement:	Four points around the equatorial circumference were measured to the nearest 0.01 mm.	EPA requires newly hatched eggs be collected at least once every two weeks. Thickness of the shell plus membrane should be measured to the nearest 0.01 mm; 3 - 4 measurements per shell.
Reference chemical, if used	None used

EPA MRID Number 45386228

I. RESULTS AND DISCUSSION:

A. MORTALITY:

No treatment-related mortality occurred during the 20-week study (p. 22). One male bird from the 200 ppm group was found dead on Day 44, one day after its body weight was determined. The study author reported that in the absence of any preceding clinical signs, this death may be the result of rough handling during body weight measurement, and was considered not to be related to treatment. No other mortality was observed.

Table 4: Effect of AE F130060 Technical on Mortality of *Colinus Virginianus*.

Treatment, ppm measured (and nominal) concentrations	Observation Period					
	Week 7		Week 14		Week 20	
	No. Dead Male	No. Dead Female	No. Dead Male	No. Dead Female	No. Dead Male	No. Dead Female
Control	0	0	0	0	0	0
38 (40)	0	0	0	0	0	0
190 (200)	1	0	1	0	1	0
1000 (1000)	0	0	0	0	0	0

B. REPRODUCTIVE AND OTHER ENDPOINTS:

Abnormal Effects/Behavior: No clinical signs of toxicity were observed (p. 22).

Food Consumption: No treatment-related effects on food consumption were observed (pp. 22 and 38-40). A statistically-significant increase in mean feed consumption was observed at the 200 ppm level compared to the control group during Week 1; however, after Week 1, the feed consumption normalized and showed no difference from the control group thereafter. Overall feed consumption averaged 38.7 to 42.9 g/pen/day for all test and control groups.

Body Weight: No treatment-related effects on body weight were observed (pp. 22 and 36-37).

Necropsy: No treatment-related pathological changes were observed in any bird upon necropsy (pp. 23 and 41). One male from the 40 ppm group had a slightly pale and enlarged liver. Another male from the 40 ppm group had very enlarged testes. Neither effect was considered related to treatment.

Organ Weights: No treatment-related effects on absolute or relative (to body) weights of the heart, liver, spleen, testes, and oviduct (without developing eggs) were observed (pp. 23 and 42-45).

Reproductive Effects: No treatment-related effects on egg production, fertility, embryonic development, or hatchability were observed (pp. 24 and 46). The study author noted that statistically-significant reductions in viable embryos was observed at the 40 (85.6%) and 1000 ppm (87.5%) groups, but that these slight differences were due to exceptional performance by the control group which achieved 95.4% fertility (compared to typical

Data Evaluation Report on the Reproductive Effects of AE F130060 Technical on Avian Species *Colinus virginianus*

PMRA Submission Number

EPA MRID Number 45386228

values of 75-90% for this species).

No changes in health or behavior, or increases in malformations of the hatchlings were observed (p. 25). In addition, no treatment-related effect on hatchling body weights or feed consumption were observed.

Table 5: Reproductive and other parameters (study author-reported).

N/A = Not statistically-analyzed.

* Statistically different from the control.

C. REPORTED STATISTICS:

The following variables were statistically analyzed: adult body weight, adult feed consumption, adult organ weights (absolute and relative), number of eggs laid per female, percentage of eggs cracked/egg laid, number of normal eggs/hen, egg shell thickness, egg weight, percentage of viable embryos/eggs set, percentage of live 3-week embryos/viable embryos, percentage of number of hatchlings/live 3-week embryos, percentage of number of hatchlings/eggs set, percentage of 14-day old survivors/number of hatchlings, percentage of 14-day old survivors/viable embryos, percentage of 14-day old survivors/eggs set, chick body weights at hatching and at 14 days of age, and offspring feed consumption (statistical report found on pp. 67-89). Nominal concentrations were used in all analyses.

For adult body weight, a one-sided Dunnett's test was conducted at a 5% level of significance. Adult food consumption and absolute organ weights were analyzed using a two-sided Dunnett's test at a 5% level of significance. Relative organs weights were analyzed using the exact two-sided Wilcoxon rank sum test with a multiple significance level of 5%.

For reproductive parameters, a monotonic dose-response relationship was assumed, and a pair-wise comparison between the control and highest dose group was performed using an exact one-sided rank sum test with a 5%

Data Evaluation Report on the Reproductive Effects of AE F130060 Technical on Avian Species *Colinus virginianus*

PMRA Submission Number

EPA MRID Number 45386228

level of significance. Lower dosages were only tested in cases where higher dose groups showed significant test results.

D. VERIFICATION OF STATISTICAL RESULTS:

Statistical Method: Analysis was conducted using "chicks.sas" (Ver. 3; March 2002), a SAS program provided by EFED/OPP/USEPA. Data for all endpoints were examined graphically using box plots to determine if they exhibited a dose-dependent response, which was ultimately used to select the multiple comparison test to detect LOAEC and NOAEC. Data for each endpoint were tested to determine if their distributions were normal and if their variances were homogeneous using Shapiro-Wilk's and Levene's tests, respectively. Data that satisfied these assumptions were subjected to Dunnett's and William's tests and data that did not satisfy these assumptions were subjected to the nonparametric MannWhitney-U (with a Bonferroni adjustment) and Jonckheere's tests. Data for dead birds were excluded from the analyses. See Appendix I for output of reviewer's statistical verification and graphs for affected endpoints to support any reviewer-generated conclusions that may differ from those reported in the study.

Table 6. Reproductive and other parameters (reviewer-reported).

Parameter	Control	38 ppm	190 ppm	1000 ppm	NOEC/ LOEC
Eggs laid/pen	50.6	53.1	54.2	54.7	1000 ppm >1000 ppm

E. STUDY DEFICIENCIES:

This study is considered scientifically valid, and the deficiencies listed were generally considered minor by the reviewer. However, since the study was conducted at concentrations that did not elicit an adverse effect, and since the maximum labeled field residue was not provided, it is unknown if the highest level tested was at an appropriate level to approximate field exposure for this species. Therefore, this study does not fulfill guideline requirements for the reproductive toxicity of AE F130060 Technical (Mesosulfuron-methyl) to the Northern Bobwhite quail (§ 71-4a).

Data Evaluation Report on the Reproductive Effects of AE F130060 Technical on Avian Species *Colinus virginianus*

PMRA Submission Number

EPA MRID Number 45386228

F. REVIEWER'S COMMENTS:

Results of the reviewer's statistical analyses were nearly identical to those of the study author. The reviewer's analysis did not detect any reductions in viable embryos or any other endpoint.

Based on mean feed consumption, the study author calculated a mean test substance intake of 3.7, 20.3, and 93.0 mg/kg bw/day for the 40, 200, and 1000 ppm groups, respectively (table on p. 22).

G. CONCLUSIONS:

This study is scientifically sound, but does not fulfill guideline requirements since the highest concentration tested did not elicit adverse effects in any parental or reproductive parameter. A subsequent LOEC was not established. This study is therefore classified as SUPPLEMENTAL. This study may be upgraded to Core status if additional information is provided indicating that the doses selected in this study were representative of maximum exposure levels.

NOEC: 1000 ppm

LOEC: >1000 ppm

Endpoint(s) Affected: None

III. REFERENCES:

A reference list was not provided.

Core Max aggregate
1x 0.013359 lbs/aiA
2x 0.062813 lbs/aiA
1000 ppm is well above any
expected field residue level
for this chemical.

BASIC SUMMARY STATISTICS

Level	N	Mean	StdDev	StdErr	Coef of Var	95% Conf. Interval
Ctrl	16	38.75	5.58	1.39	14.40	35.78, 41.72
Dose1	16	39.20	4.61	1.15	11.76	36.74, 41.65
Dose2	15	42.89	8.74	2.26	20.38	38.05, 47.74
Dose3	16	39.81	7.08	1.77	17.79	36.04, 43.59

Level	Median	Min	Max	%of Control(means)	%Reduction(means)
Ctrl	38.22	32.18	50.72		
Dose1	37.96	31.93	48.49	101.16	-1.16
Dose2	43.49	31.64	62.67	110.70	-10.70
Dose3	38.89	33.21	63.69	102.75	-2.75

NON-PARAMETRIC ANALYSES - use alpha-level=0.05 for all tests

Kruskal-Wallis test - equality among treatment groups

Degrees of Freedom	TestStat	P-value
3	2.46	0.483

MannWhit(Bon) - testing each trt median signif. less than control

Jonckheere - test assumes dose-response relationship, testing negative trend

Level	Median	MannWhit(Bon adjust)p-value	Jonckheere p-value
Ctrl	38.22		
Dose1	37.96	1.000	0.618
Dose2	43.49	1.000	0.923
Dose3	38.89	1.000	0.756

SUMMARY

MannWhit (Bonf adjust)	NOEC	LOEC
Jonckheere	Dose3	>highest dose
	Dose3	>highest dose

Data Evaluation Report on the Reproductive Effects of AE F130060 Technical on Avian Species *Colinus virginianus*

PMRA Submission Number

EPA MRID Number 45386228

Bobwhite quail repro, Mesosulfuron-methyl, MRID 45386228
ANALYSIS RESULTS FOR VARIABLE WTGAINM (Male wt gain)

TESTS OF ASSUMPTIONS FOR PARAMETRIC ANALYSIS

Shapiro-Wilks test for Normality of Residuals -- alpha-level=0.01.

Levenes test for homogeneity of variance (absolute residuals) -- alpha-level=0.05

Use parametric analyses if neither test rejected, otherwise non-parametric analyses.

Page ____ is not included in this copy.

Pages 44 through 100 are not included in this copy.

The material not included contains the following type of information:

- Identity of product inert ingredients.
- Identity of product impurities.
- Description of the product manufacturing process.
- Description of quality control procedures.
- Identity of the source of product ingredients.
- Sales or other commercial/financial information.
- A draft product label.
- The product confidential statement of formula.
- Information about a pending registration action.
- FIFRA registration data.
- The document is a duplicate of page(s) ____.
- The document is not responsive to the request.

The information not included is generally considered confidential by product registrants. If you have any questions, please contact the individual who prepared the response to your request.
